

# Teverra Case Study

## Geothermal resource assessment in the State of Wyoming: Helping kick-off geothermal development in Wyoming

The state of Wyoming wanted to provide value to their taxpayers by better understanding the geothermal opportunity within the state and asked TEVERRRA to complete this analysis.

TEVERRRA completed a comprehensive literature review, data review, and market analysis on the geothermal opportunities in Wyoming for the Wyoming Energy Authority. The primary goal of this work was to assess the degree of understanding and feasibility for geothermal opportunities characterized by commercial geothermal utilization technologies and their effectiveness in the state of Wyoming. The state is using the insight gathered from this study to determine next steps for geothermal development.

### Potential wells for repurposing for electricity
